COVID-19 – Highlights

- Cases According to a company news release, [Novavax's](#) two-dose COVID-19 vaccine showed 90% overall vaccine efficacy (VE), 100% protection against moderate and severe illness, and 93% VE against variants of concern and of interest in a phase 3 US clinical trial in adults.

According to the [NY times](#), despite the impressive results, the vaccine's future in the United States is uncertain and it might be needed more in other countries. Novavax reportedly may not seek emergency authorization from the Food and Drug Administration until the end of September.

- In 2020, the annual Maternal Mortality Ratio (MMR) in Bahia, Brazil, was 78.23/100,000 live births, 59.46% higher than the expected ratio (49.06 [95% CI 38.70–59.90]). The increase in maternal mortality ratio relative to expected values was observed throughout the 2020 months; however, only after May, when the COVID-19 epidemic rose sharply, it exceeded the upper limit of the 95% CI of the monthly prediction.
