COVID-19 - Highlights

Maps 1 and 2, in page 6, show COVID-19 case incidence per 100,000 populations divided into four quarters in 2020 and 2021.

After the first detection of cases, COVID-19 spread rapidly, and was reported in most 1st administrative level divisions among 54 countries and territories by the end of June 2020.

In July to September 2020, a large outbreak of cases was reported in the Amazon region of Brazil, particularly in Roraima, followed by Amazon bordered area of Peru.

Overall, the highest incidence rate was observed in October to December of 2020. The highest incidence rate during these periods was mainly observed in the United States, and southern part of Argentina.

January to March of 2021 continued to see an elevated incidence rate, with highest rates observed throughout the Amazon region of Brazil and Colombia, as well as Argentina, and the United States.

Notwithstanding the 5 weeks left in Q3 of 2021, most countries have reported higher incidence rates in July to August of 2021 compared to Q2 of 2021.

Starting the weekend of 26 June 2021, the PAHO COVID-19 daily situation reports will no longer be published on Saturdays and Sundays. The reports will continue to be published during the workweek-Monday through Friday – at the regularly scheduled time, with the exception of any official holidays observed by PAHO in Washington, DC

| Puerto Rico | 168,064 | 2,804 | 1.7%, |

*Numbers may vary due to differences in reporting times.

Information current as of 27 August 2021, 11h00 EDT – Highlighted in grey: Updates with respect to the information published on 20 August 2021

Based on viral genomic sequencing, on 14 December 2020, the authorities of the United Kingdom reported to WHO a SARS-CoV-2 variant known as Alpha; on 18 December 2020, the authorities of the Republic of South Africa reported to WHO a SARS-CoV-2 variant known as Beta; and, on 13 January 2021, the authorities of Brazil reported to WHO a SARS-CoV-2 variant known as Gamma. SARS-CoV-2 variants Alpha, Beta, and Gamma are defined as Variants of Concern (VOC), together with variant Delta, identified in India in October 2020.¹

Starting on 18 December 2020, WHO shared that information with authorities across the globe about SARS-CoV-2 VOC and Variants of Interest (VOI), through dedicated channels established under the International Health Regulations (IHR), as well with the public through the WHO web site. ^{2,3,4}

International traffic-related measures adopted by States Parties in the Americas in response to the detection of SARS-CoV-2 variants

The table below summarizes international traffic-related measures adopted by States Parties to the IHR in the Region of the Americas in response to the detection of SARS-CoV-2 variants. Measures adopted are consistent with current Temporary Recommendations, sissued by the Director-General of WHO in the context of the Public Health Emergency of International Concern (PHEIC), determined on 30 January 2020 according to IHR provisions.

Table notes on the next page.

NOTES:

- Case and death counts may include both confirmed and probable classifications depending on the reporting Member State.
- Antibody tests, including rapid diagnostic tests (RDTs) based on antibody detection, are not recommended for use by PAHO/WHO in clinical diagnosis. Antigen-detecting RDTs may be used following the WHO 11 September 2020 Guidance, available at: https://bit.ly/2FxK2fs.
- Data is updated on a weekly basis for Guadeloupe, Martinique, Nicaragua, Saint Barthelemy, Saint Martin, and Saint Pierre and Miguelon.
- As of 11 November 2020, the previously aggregated Bonaire, Saba and Sint Eustatius are nowbeing presented separately in the table.
- * A dispute exists between the Governments of Argentina and the United Kingdom of Great Britain and Northern Ireland concerning sovereignty over the Falkland Islands (the) (Malvinas)

Argentina: On 14 March 2021, due to daylight savings time observed in Eastern Standard Time zone, the Argentina data is no longer published by 3:00PM EST same day and is henceforth included in the following day table. Between 22 February and 14 March 2021, the data had corresponded to the same date.

Bahamas: According to the latest Bahamas Ministry of Health (MoH) publication, there are a total of 47 additional deaths under investigation, available at: https://bit.ly/3wh84Aq.

Ecuador: According to a 6 September Ecuador Ministry of Public Health press release, only cases confirmed by RT-PCR will be reported; previously, cases who tested positive by either RT-PCR or RDTs were reported, resulting in the exclusion of 8,956 cases. Available at: https://bit.ly/3h2EWEA.

El Salvador: Cumulative cases and deaths as published by the Government of El Salvador: https://covid19.gob.sv/. The government presents a retroactively adjusted epidemiological curve of daily cases on the same dashboard.

Guadeloupe: Deaths are aggregated for Guadeloupe, Saint Martin and Saint Barthelemy in Sante Publique France weekly publications; death counts for Guadeloupe are calculated subtracting deaths in Saint Martin and Saint Barthelemy. Available at: https://bit.ly/39UMysd.

Jamaica: According to the latest Jamaica Ministry of Health and Wellness press release, there are a total of 145 additional deaths under investigation, available at: https://bit.ly/3gAwlJo.

Mexico: On 1 June 2021, the Mexico Ministry of Health reported 4,272 deaths in 24 hours. Of these, 3,924 were reported in 2020 and the remaining were reported in 2021. Available at: https://bit.ly/3pfdMA8.

Nicaragua: Please note there are discrepancies with the data published by the Citizen's Observatory COVID-19 Nicaragua as of 20 August 2021. Available at: https://bit.ly/3pw7ZVR.

Peru: Aggregated case total as reported by the Peru MoH; latest disaggregated data available is 635,044 by RT-PCR + 564,584 by antigentests + 942,525 by other RDTs. Antibody tests, including RDTs based on antibody detection, are not recommended for use by PAHO/WHO in clinical diagnosis. Antigen-detecting RDTs may be used following the WHO 11 September 2020 Guidance, available at: https://bit.ly/3fJVKTM. On 31 May 2021, the Government of Peru announced that, after revision, the death toll was 180,764 deaths as of 22 May 2021, available at: https://bit.ly/3fYGj8V. The number of cumulative deaths reported prior to the revision, on 30 May, was 69,342, available at: https://bit.ly/3pkar2U.

Puerto Rico: Aggregated case total as reported by the Puerto Rico Department of Health (DoH); 140,130 were positive by RT-PCR and 27,934 were positive by antigen tests; previously, cases who tested positive by either RT-PCR or serological RDTs were reported, resulting in the exclusion of 33,965 cases. Available at: https://bit.ly/3AXY7KU.

United States of America: Case and death counts include both confirmed and probable classifications, as published on the U.S. Centers for Disease Control and Prevention (US CDC) website on 27-August. Excludes American Samoa, Federated States of Micronesia, Guam, Commonwealth of the Northern Marianas, Puerto Rico, Palau, Republic of Marshall Islands and the United States Virgin Islands. Case and death counts may differ from other US CDC data sources because these are provisional counts which are subject to change, including updates to data reported previously, adjustments can occur.
